Product introduction

DOTT HAIR

THE BREAKTHROUGH
HAIR REGROWTH FORMULA

FOR WOMEN

Treatment for Female Androgenetic Alopecia

The breakthrough hair loss solution!

At present, there are many adult Japanese women suffering from FAGA. It is said that 1 out of 10 Japanese women suffer from hair loss and thinning hair and that the number is increasing.

Compared to men's hair loss which is characterized by receding hairline and gradual hair loss on top of the head, female hair loss is triggered by a complex web of symptoms such as menopause, irregular menstruation, hormone imbalance, excessive dieting, stress, childbirth, frequent hair coloring or hair perms.

It is important to have proper knowledge and reliable technology in order to treat these women hair loss sufferers. The mechanism of female hair loss is different from male hair loss and by providing a treatment that is primarily designed for female hair loss, it could be said that the therapeutic effect could be more easily be obtained.

factory

3 High grade and well balanced active ingredients

A well-balanced combination of highly absorbable active ingredients are expected to deliver faster results than the regular medicinal products.

1 Minoxidil

Improve blood circulation in the scalp

Originally as a vasodilator, minoxidil was the only ingredient permitted by the FDA as a topical hair grow medicine. It promotes hair growth by improving blood circulation in the scalp and the dispersion of the necessary hair grow active ingredients.

2 Spironolactone

Female hormonal balance and hair growth

It has been reported that by restoring the female hormone balance, female hair growth has been observed.

3 Amino acids, etc.

Necessary ingredients for hair growth

Vitamins, amino acids, minerals (zinc, etc.) (in the tablet)
Ingredients that are necessary for hair growth.
